

## **Traveling with Pets to Spain: A Checklist**

☐ Figure Out Your Travel Plans
☐ Airlines, flights, cabins that will take pets
☐ Approved pet travel carrier
☐ Prepare for the Certificate Process
☐ Find a vet who does international certificates
If you have to switch vets, make sure they don't require a "joining the practice" visit prior to your actual certificate visit.
<ul> <li>Microchip and vaccinate your pets (must happen at least 21 days before you arrive in Spain)</li> </ul>
☐ Book a visit to get the certificate
<ul> <li>In some cases, this can be 30 days before your landing date (with the endorsement by the US Department of Agriculture later)</li> </ul>
<ul> <li>Other vets prefer to do this on the same day they send the certificate to be endorsed (so 10 days before you land)</li> </ul>
<ul> <li>Get the certificate endorsed by the US Department of Agriculture (must be 10 days before you land)</li> </ul>
☐ Before and During the Visit
What information does the vet need you to bring? (stool sample, vaccination records, older examination records)
You will need a self-addressed priority Fedex label printed out
<ul> <li>Talk with the vet about travel times and get their advice on what to bring on the flight</li> </ul>
☐ On the Day of Travel
<ul> <li>Bring their rabies vaccine documents, their proof of microchipping, and all of the USDA documents</li> </ul>
☐ Have a plan for accidents (a few puppy pads would be wise)
☐ Have a plan for food and water (our cats wanted neither)
<ul> <li>Have a plan for food and water at the hotel (bring at least a few weeks worth of familiar food)</li> </ul>
☐ Be prepared for unhappy pets
☐ On arrival
<ul> <li>Take your luggage and your pets to a special pets area to clear before you leave the secure area</li> </ul>
Show all of your documents, they will want to make sure that the microchip numbers on the documents match those on the scanner they use for each pet
